

Sennheiser brings latest array of smart business solutions to UC Expo

The audio specialist will showcase TeamConnect Intelligent Speaker and TeamConnect Ceiling 2 among other offerings covering effective collaboration and the future of the workplace

London, October 2022 – Sennheiser, the first choice for advanced audio technology that makes collaboration and learning easier, is pleased to announce that it will be joining Europe’s leading unified communications event, UC Expo, from 12th – 13th October at London ExCel. This year’s event will see the global audio specialist show an array of its latest intelligent solutions including TeamConnect Intelligent Speaker (TC ISP) and TeamConnect Ceiling 2 (TCC2) with TruVoicelift technology, and its SpeechLine Digital Wireless microphone system that are all designed to increase productivity, enhance employee and customer experience and offer more intelligent ways to collaborate.

As well as offering product demos on the stand, Sennheiser will also take part in the *Blurred Lines: Engineering And Equipping The Modern Workplace* panel discussion, where Inesh Patel, Business Development Manager – Business Communication at Sennheiser, will join representatives from Bose and T1V to discuss topics such as the diversification of space applications, as lines continue to blur between work, rest and play, and the best way of balancing video and audio for optimal experiences.

The TC ISP is the ultimate new audio solution for mid-sized Microsoft Teams rooms. Optimised for up to 10 people, it is designed specifically to give teams a whole new way to collaborate in hybrid meetings: smart, focused, inclusive and as if everyone is in one place. Intelligent solutions such as the integrated Cortana voice recognition software make operation on the product itself obsolete. Automatic meeting notes make an inclusive meeting experience possible for remote and hard-of-hearing participants. As an integral part of the room and equipped with the latest technology, the product offers an omnidirectional speaker and covers a 3.5m radius with seven integrated beamforming microphones.

“As hybrid work has established itself from an interim solution to a permanent component in business and education, employees expect their familiar collaboration platform to remain an essential part of their work experience, no matter if they join a meeting remotely or on site,” says Patel. “Sennheiser’s top priority has always been to open up a product experience for its

customers that integrates into their own personal working habitat and, at the same time, keeps up with the times and resulting requirements. That's why, for example, our TeamConnect Ceiling 2 ceiling microphone is Microsoft Teams certified as well as Zoom certified. As a company, we are focussed on creating solutions that support the current and emerging needs in people's everyday work, and we are thrilled to bring those offerings to this year's UC Expo!"

The TCC2, meanwhile, with its patented automatic dynamic beamforming technology, was already a leader in conference room audio technology. Now, with the addition of TruVoicelift and advanced zone control, TCC2 combines the advantages of a boundary microphone and a microphone array. It is the best solution for both video conferencing and in-room audio in classrooms, lecture halls and boardrooms. TCC2 offers unparalleled levels of control with the addition of a priority zone, five advanced exclusion zones and more. All these new features are activatable and configurable via the latest firmware update for TCC2 and via the latest version of Sennheiser Control Cockpit.

Visit Sennheiser on Stand T14 at London ExCel from 12th to 13th October, 2022.

About the Sennheiser brand

We live and breathe audio. We are driven by the passion to create audio solutions that make a difference. Building the future of audio and bringing remarkable sound experiences to our customers – this is what the Sennheiser brand has represented for more than 75 years. While professional audio solutions such as microphones, meeting solutions, streaming technologies and monitoring systems are part of the business of Sennheiser electronic GmbH & Co. KG, the business with consumer devices such as headphones, soundbars and speech-enhanced hearables is operated by Sonova Holding AG under the license of Sennheiser.
