

Towards climate neutrality in 2035

Why 2035?

- **It's our purpose:** living within the capacity of one earth.
- **Urgent action needed:** scientific evidence shows 1.5°C will be exceeded before 2040.

Absolute emission pathway to climate neutrality

- Eneco One Planet CO₂ ambition 2020
- 1.5°C emission pathway 2020
- Eneco base year 2019
- Scope 1 and 2: absolute emissions resulting from our own operational activities
- Scope 3: absolute emissions resulting from our chain and customers¹⁾

100% renewable electricity supply for retail customers in The Netherlands Belgium and Germany.

2020

Double renewable generation capacity.

2025

100% renewable electricity supply for business customers in The Netherlands Belgium and Germany.

2030

Climate neutral electricity and heat supply to all customers.

2035

Our climate actions

Radical electrification

Large-scale electrification of industry, mobility and the built environment with exclusively renewable energy from new wind and solar farms.

Phasing out natural gas

Converting or closing our gas-fired power stations and making natural gas-powered homes and buildings more sustainable with home insulation, (hybrid) heat pumps and heat networks.

Accelerating sustainable heat

Through innovation and investment in sustainable sources: geothermal, aquathermal, electrode boilers, heat and cold storage, green gas and green hydrogen.

Setting the pace together with customers, policy makers and partners

Milestones towards 2035

¹⁾ Note: approximately 0.9 Mt (6%) of 13.9 Mt CO₂ emissions will be temporarily compensated in 2035.
