INTRODUCING ADDAC WHEELED CART

We're all gear lovers and we know how hard it is to achieve the perfect working setup, different factors come to play: space constraints, ergonomics and aesthetics to name only a few.

With these ideas in mind we designed a cart to be a side companion to any musician's main desk, designed to house most standalone music devices, pedals, drum machines, desktop and small keyboard synths and what not.

This is a customizable cart expandable up to 12 drawers where the user can also set their custom heights to fit any hardware from any brand. There's 12 sets of pre-drilled holes every 5cm in height. Bottom shelf fits smaller pedal boards

Large 10cm caster wheels allow smooth movement around the room, lockable wheels are optional.

Top platform and all drawers have a high lip to prevent hardware slippage.

19" Rack Compatibility:

Because the cart is wider than standard 19" racks we created rack extensions to be installed by the user at his preference. these allow an easy instalment of patchbays, soundcards or any other rack gear.

CUSTOM DRAWERS

Drawers can be purchased independently and easily installed by the user as your setup expands over time.

Drawers can be installed at every 5cm in height to fit any hardware device. Pre-drilled holes are already made and heights can be easily changed at any time to adapt to any evolving setup.

Drawers can also be removed entirely, a small lever inside the drawer runner allows the drawer to be removed from the cart allowing easy installation of hardware.

Small lever allows to remove drawers from the runner.

IN USE

Here's a 5 drawer version hosting a TG33 desktop synth, a Roli Seaboard 25, a Mellotron micro, Soma's lyra8, Elektron's Digitone, 2 midi controllers, several pedals and a patchbay (using our rack adapters) to conveniently re-arrange the pedal path on the fly.

A small pedal board at the bottom shelf can be pulled to the floor for use and placed in the cart for storage.

Rack Adapters

Patchbay
Allows easy
changes in the pedals path

IN USE

The back of this cart features a dual power strip with 16 outlets and 2 main power switches in rack format using our rack adapters.

As 6 of the hardwares have midi we installed a midi hub so that only one USB cable goes out to the computer.

A multipar cable connects all synths and conveniently sends one single cable out of the back into our soundcard.
