New variations, same high standards, amplified style

The call of the open sea continues with the new variations of the Ophrys line. With bold character and modern aesthetics, these pieces establish themselves as an essential extension of the male wardrobe, making a statement both underwater and in the city.

Inspired by the world of diving and designed for adventure, these new 42.50 mm models stand out with water resistance up to 20 bar, a guarantee of performance and reliability.

The four watches feature a sapphire glass bezel and a sapphire crystal with anti-reflective coating for optimal visual comfort. The indexes and hands are coated with Super-LumiNova®, ensuring excellent readability even in the dark. The ETA HeavyDrive movement provides enhanced shock resistance. All these technical features accurately reflect the expertise and technical precision of this line.

Finally, the brushed finishing on the steel parts – both on the case and the bracelet – create a textural interplay that catches the light, adding true depth to the collection.

These four new models are available in the following variations:

- Stainless steel, with black dial and bezel
- Stainless steel, with black dial, bezel and rubber strap
- Bicolour version in stainless steel and 5N pink PVD, with anthracite dial and bezel
- Bicolour version in stainless steel and 5N pink PVD, with anthracite dial, bezel and rubber strap
