## Press Information

### TAKING LUXURY EVERYWHERE

- The Bentayga has been subjected to the most rigorous and extensive testing and development programme in Bentley's history.
- Development cars have been tested across five continents, from England, Arizona, South Africa, Germany, Dubai, New Zealand, to the North Cape, Artic Circle and China to ensure unwavering performance in all conditions.
- Along with extreme conditions, the Bentayga has also been tested extensively in more typical, every-day environments. Driver assistance systems have been refined in cities and on highways around the world.
- Total mileage accrued by development cars exceeds one million miles (1.6 million kilometres).
- The envelope of temperatures experienced by the Bentayga ranges from -30°C to +53°C. The car is only released for production when every single system operates flawlessly across this environmental spectrum.
- The car must be able to achieve its top speed of 187 mph (301 km/h) in a 40°C ambient temperature, with no degradation in refinement or cooling performance.
- Off-road, the car has experienced snow, ice, mud, sand dunes, rocky trails and forest tracks. It has driven past 35° of inclination in all directions.
- For the first time, Bentleys have been subjected to towing tests, using trailers weighing up to 3,500 kg.
- The Bentayga has also driven more than 400 laps of the famous Nürburgring Nordschleife circuit, to develop the dynamic performance of the chassis and fine tune the relevant control and stability systems. The unique features of the Nordschleife, including the high level of topographical change, variety of surface grip levels and wide range of cornering speeds, made it the perfect place to develop the fastest, most powerful SUV in the world.
