

Sennheiser Announces Major Enhancements to TeamConnect Bar Solutions

Currently available for free download, firmware update 1.3.8 upgrades camera performance and security, among other features

Wedemark, Germany, 11 December 2025 — Sennheiser, the first choice for advanced audio technology that makes collaboration and learning easier, has announced a firmware update that improves the already robust feature set of its TeamConnect (TC) Bar Solutions. Aimed to improve user experience, firmware update 1.3.8 includes camera enhancements, additional Dante audio outputs, increased network reliability and improved security and energy efficiency.

Sennheiser's TC Bar Solutions are the most flexible all-in-one devices for small to mid-sized meeting rooms and collaboration spaces. The TC Bar S features four microphones and two speakers, while the TC Bar M features six microphones and four speakers. Both are certified for Microsoft Teams and include benefits like Trusted Sennheiser Audio Quality, easy setup, brand-agnostic integration, easy management and control, high video quality, security and sustainability.

With the latest firmware update, the TC Bar's 4K AI-enhanced camera's person tiling and auto-framing features reduced frame movement, which delivers a more natural, engaging, and lifelike video experience. In response to customer feedback, the new default camera mode will allow users to experience more consistent camera behaviour during meetings, while making temporary in-call adjustments via remote possible.

TC Bars come standard with full-range stereo speakers for best-in-class audio performance. For users requiring a setup with additional audio outputs, the update enables connection of standalone speakers via Dante. Further, the external speakers can also be used to stream audio continuously to Sennheiser's bi-directional communication solution, MobileConnect.

The firmware update will improve user experience in several other ways. To ensure meetings start without delays, the TC Bars' standby wake-up times have been significantly reduced by optimizing the default energy mode and adding an optional "Always On" setting. The update also delivers peace of mind to users by ensuring that the TC Bars are compliant with all current security and regulatory standards. For complex environments, especially in split mode setups, network reliability has been improved through enhanced routing, ensuring an even more smooth and professional experience.

The latest firmware version is available for free and can be downloaded via Sennheiser Control Cockpit or by visiting the Sennheiser [website](#) and selecting TC Bar S or TC Bar M, scrolling down to the “Downloads” section and selecting “Firmware Updates”.

About the Sennheiser Brand – 80 Years of Building the Future of Audio

We live and breathe audio. We are driven by the passion to create audio solutions that make a difference. This passion has taken us from the world’s greatest stages to the quietest listening rooms – and made Sennheiser the name behind audio that doesn’t just sound good: It feels true. In 2025, the Sennheiser brand celebrates its 80th anniversary. Since 1945, we stand for building the future of audio and bringing remarkable sound experiences to our customers.

While professional audio solutions such as microphones, meeting solutions, streaming technologies and monitoring systems are part of the business of Sennheiser electronic SE & Co. KG, the business with consumer devices such as headphones, soundbars and speech-enhanced hearables is operated by Sonova Holding AG under the license of Sennheiser.
