

Press Release

Explore the future of compounding at AMI's Compounding World Expo Europe

The Compounding World Expo Europe is taking place at the Brussels Expo in Belgium on 11-12 September 2024. Returning for the fourth time, this free-to-attend expo and conference brings together industry leaders, experts and enthusiasts from around the globe for two days of learning, inspiration and networking opportunities.

The conference for the Compounding World Expo has just been announced and boasts a comprehensive agenda that covers the latest technological innovations, legislative changes and market drivers in the world of compounding. From the diverse array of industry presentations, attendees can expect to learn about the latest advances in batch mixing technology, recent innovations in conductive fillers, developments with natural fibres as renewable reinforcing agents, optimisation of pigment optics, and much more. The event offers a platform for industry leading organisations to share their knowledge and expertise, along with unique learning opportunities, with a training seminar taking place each day on how to overcome performance challenges within compounding lines.

In addition to industry talks, the event features distinct business debate panels discussing key issues for the sector. With increased costs caused by economic inflation, the rise of automation, supply chain difficulties and various business mergers, this is a challenging time for the plastics industry but one that offers new opportunities for sustainable growth

The event's keynote presentations also offer attendees an engaging experience with an in-house expert from AMI delivering an outlook on the demand trends shaping compounding and masterbatch on day one, and special presentation from our event supporter EuMBC, discussing the current challenges and regulations within Europe on day two.

Beyond the theatre, attendees can take advantage of extensive networking opportunities in the exhibition hall, enabling them to forge new connections, exchange ideas, and collaborate on projects that drive positive change in the compounding sector. AMI's Compounding World Expo Europe offers a platform for education, collaboration, and innovation, empowering attendees to contribute to the development of sustainable practices and strategies that will shape the future of compounding

Co-located with the Plastics Recycling World Expo and Plastics Extrusion World Expo, attendees can choose sessions from any of the three featured conference theatres and explore over 170 exhibitors across the three focused expos.
