

Dear Reality päivittää spatialisointi- ja virtuaalisen seurannan liitännäisiä

Esittelyssä patentoitu Clarity-algoritmi sekä Apple Logic Pro- ja Apple M1 -tuki

Helsinki, kesäkuu 2022 – Immersiivisen äänentoiston asiantuntija Dear Reality on julkaissut uusia kiehtovia päivityksiä spatialisointi-, seuranta- ja miksausliitännäisiin. dearVR PRO- ja dearVR MUSIC -spatialisointiliitännäiset sisältävät nyt patentoidun Sennheiser AMBEO Clarity -algoritmin, joka mahdollistaa edistyksellisen kaksikanavaisen tuotannon vähäisemmällä äänen väritymisellä. Lisäksi dearVR PRO- ja dearVR MONITOR -ympäristöt tukevat nyt täysin Apple Logic Pron monikanavaisia formaatteja ja Dolby Atmos -työnkulkuja, minkä ansiosta käyttäjä voi seurata ja luoda monikanavaisia miksausja Atmos-tuotantoja. Yhtiön kehittämä Spatial Headphone Compensation -ominaisuus (jota käytetään dearVR MIX- ja dearVR MONITOR -ympäristöissä) tukee myös luokkansa parhaita suljettuja Sennheiser HD 300 PRO -kuulokkeita, ja sisäänrakennetun Apple Silicon M1 -yhteensopivuuden ansiosta kaikki Dear Reality -liitännäiset sopivat täydellisesti immersiiivisiin pöytä tietokone- ja etätuotantoihin.

New Clarity Feature – enhanced possibilities for professional binaural audio productions

Binaural audio processing is a great way to add a new sound dimension to audio productions. By adding the Sennheiser AMBEO Clarity algorithm, Dear Reality enables users to reduce unwanted signal alterations resulting from head-related transfer functions (HRTF), thus taking the binaural processing to the next level. “A human voice, for example, is so familiar to us that even slight changes already have a huge impact, while synthesized sounds need stronger binaural filtering to be perceived as coming from the correct direction,” explains Christian Sander, co-CEO of Dear Reality.

The new Clarity feature in dearVR PRO and dearVR MUSIC lets users define the perfect balance between externalization and colorization, depending on the direction and source material. This also facilitates the smooth transfer to regular stereo loudspeaker playback devices.

The new Clarity feature lets users set the perfect balance between externalization and colorization

dearVR PRO and dearVR MONITOR – added multi-channel compatibility for Apple Logic Pro v.10.7

dearVR PRO and dearVR MONITOR now fully support Apple Logic Pro's integrated Dolby Atmos workflow, enabling users to enhance immersive sessions up to 7.1.4.

With dearVR PRO, the state-of-the-art binaural, Ambisonics, and multi-channel spatializer, Logic users have a full 360° immersive panner at their fingertips, placing the listener at the center of sound in 46 vivid virtual acoustic environments for modern professional music production and post production.

dearVR MONITOR, on the other hand, enables them to monitor all common speaker setups simply via headphones – anytime and anywhere, without the limitations imposed by unreliable room acoustics or missing multi-channel speaker setups. dearVR MONITOR offers a perfect virtual mix room to reliably produce in 26 multi-channel loudspeaker formats.

Spatial Headphone Compensation

Dear Reality has also expanded the Spatial Headphone Compensation in dearVR MONITOR and dearVR MIX with additional headphone models, including the Sennheiser HD 300 PRO.

These two plugins now support Sennheiser's entire professional studio headphone range from the legendary HD 25 to the open-back HD 400 PRO.

Dive into immersive productions with dearVR PRO, dearVR MONITOR and Apple Logic Pro

Apple Silicon M1 compatibility

The latest versions of Dear Reality's dearVR PRO and dearVR MUSIC spatializers as well as dearVR MONITOR and dearVR MIX monitoring solutions provide fully native Apple Silicon support. This makes these plugins the perfect tools for immersive desktop or remote productions, leveraging the full performance of Apple M1 devices.
