

**NEUMANN KH 750 DSP SUBWOOFER  
DEEP BASS IN A SMALL SPACE**

***Berlin, January 24, 2019 – With the KH 750 DSP Neumann presents a new – particularly compact – subwoofer. It is the ideal choice for smaller rooms and the perfect complement to the Neumann KH 80 DSP studio monitors.***

The KH 750 DSP has a unique and flexible 2.0/0.1 Bass Manager allowing the subwoofer to be used in many different system

configurations. On the back panel there are analog and digital inputs and outputs, four routing modes and adaptable acoustical controls to allow for seamless system integration. The Neumann.Control App for iPad® gives access to many additional functions inside the subwoofer.

The newly designed 10” long-throw driver has a large magnet, linear motor design and a very stiff pressed steel basket. As subwoofers are usually placed on the floor, a robust grille protects the driver from accidental damage. The well-braced cabinet is a sealed design which brings the fastest possible transient response. The two analog XLR inputs are balanced as are the two analog XLR outputs. The 192 kHz / 24-bit digital input can accept AES3 and S/P-DIF signals.

The KH 750 DSP can be used in music, broadcast, and post production studios for tracking, mixing, and mastering. Wolfgang Fraissinet, President of Neumann.Berlin, adds: "Thanks to the significantly reduced housing depth, the KH 750 DSP is 'compatible' with the often confined space available in home recording and broadcast studios."

**Features:**

- Easily installed compact cabinet with a very deep bass response
- DSP engine optimizes output to achieve reference class sound
- Neumann.Control App for iPad® to set up, align and operate in a system
