

How Does RoboGolfPro Work?

Customize Your Swing

RoboGolfPro lets the trainer show the golfer the actual perfect ergonomic, efficient and physically correct golf swing for your ability and physique. RoboGolfPro is the only machine in existence that takes your club and physically guides you through a perfect swing.

Up until now golfers have had to rely on feedback by a coach, video analysis, or funny looking swing contraptions. There was no way for a golf coach to have the ability to record your swing, then make corrections to it in the computer, and finally give you your swing back in the form of a robot-assisted swing.

You hold onto your club, and the robot guides you through the corrected swing each time a little faster. As you try to fall back on old habits, the robot resists and forces you to follow each component of your golf swing perfectly.'

What is the number one benefit of using RoboGolfPro?

The golf ball does what the golf club tells it to do. If your mechanics is correct, then your body will follow. RoboGolfPro teaches you the swing you need and then you can adjust your body to match it. You've given your perfect swing!

Do you use my clubs on RoboGolfPro?

No, there are a series of clubs that RoboGolfPro uses. It accommodates all sizes and grips, woods, irons, etc. Your Pro will quickly set it up for your game. If you wanted to use your favourite club type, it can be specifically made for you. You would need to purchase an identical club as it would need to be modified for the golf robot and cannot be used as a regular golf club afterwards. This point of the robot is to give you the mechanics of the swing rather than duplicate the grip.

RoboGolfPro Creates New Muscle Memory

If you tend to hook and slice then there is a fundamental part of your swing that needs to be corrected; sometimes the finest of adjustments can make all the difference in the world. The golf ball simply reacts to the face, contact and force of your golf club. If you create a perfect situation when contacting the ball then, you will have a great shot. The problem is that without the robot, it takes significantly more practice to achieve the same result simply because you won't get an instant "Ah-Ha" moment as you do on the RoboGolfPro.

Golf coaches now have access to the most advanced golf training tool in the world. There are many things that are illegal in golf. Although RoboGolfPro is considered to be the ultimate unfair advantage in golf today; it does not break any rules or guidelines as it is a training tool for golfers.

Whether you are a beginner golfer or golf Pro, there are always things you need to improve in your game. The RoboGolfPro is the only golfing tool of its kind in the world that gives the player instant "hands on" feedback.

It can teach the basics of the correct golf swing, or it can fine-tune the most finite weakness of a swing. Because it allows the golfer to feel an actual live swing in a way that is completely realistic, it almost instantly creates the "Eureka" moment for the golfer. And it gets better...

These are massive improvements that could have normally taken years to achieve without the RoboGolfPro

Statistics states that the ten most accurate hitters on the Pro Golf Tour miss the fairway about 50% of the time. Statistically, Tiger Woods only hits the fairway 57.2% of the time and Annika Sorenstam hits it only 76.1% of the time! Men out drive the women in sheer distance, but women are more accurate.

You can try these figures for yourself and simply feel what the best swing for your body type and ability is by spending a little time on the golf robot with your coach. Just imagine what the

RoboGolfPro could do for your game if your swing were perfect... you could actually feel the swing many times first before trying to develop it on your own through trial and error!

Correctly addressing the golf ball is of supreme importance in golf.

When a player misses, tops or scuffs a ball two or three times running, they immediately commence to hit at it harder and harder in an effort to get it away. Instead, they should acknowledge the lack of care and skill in not hitting accurately and devote their attention to a clearer view of the ball on the next shot.

The RoboGolfPro works on the principle that there are several main components to having your golf swing make a clean, square contact with the golf ball. If any one of the components is weak, or is implemented too soon, too late or incorrectly, then the result is killing your golf game and adding nothing but frustration to it.

Video analysis, coach or a golf swing contraption that points out your mistakes is simply not enough. It is especially true when one wants to drastically reduce the learning curve into moments instead of hours, months or years using a machine that only a few short years ago, was technologically impossible to have on the market.

Now your coach can have the power to record your swing, correct it on a PC using specialized software and then give you back your corrected swing. The RoboGolfPro rebuilds your swing and resists your bad habits, mistakes and tendencies. Your trainer corrects it on the spot and then lets you FEEL the correct swing for you. With a few minutes of practice, each time moving a little faster, you develop new muscle memory and new golf swing habits that help your game.

Using the RoboGolfPro, your golf pro has effectively given you a perfect swing for your game on the spot, giving you the perfected swing in a matter of comments instead of months!

Do I move the robot or does it move me?

The RoboGolfPro was specifically designed to take your golf club and move it according to the input of your trainer or pro. It was designed to take your abilities, skills, assets and weaknesses into consideration. Using this information, along with the golf Pro's advice, it creates the most effective swing for you and your game.

The RoboGolfPro gives you back your new revised swing so that you can feel it. You can practice your swing, but the robot will force you to learn your new and improved swing. It will not let you fall into your old habits. By doing this repetitively on the robot, you will create new Muscle Memory.

RoboGolfPro remembers you and your stroke so that you can come back for a refresher or a practice session. You can measure and gauge your progress because you are working from a perfect model. The golf robot does not deviate; the human does.

Does it work for my short game?

Using the RoboGolfPro to improve short game stroke is effective for beginners. There is an art form or technique to getting the ball in the air. The RoboGolfPro will demonstrate proper movement, and it will help the golfer present the proper face of the club instead of the golfer trying to go under the ball to make it fly. These are critical parts to every chip and pitch shot!

How does my Golf Pro create the swing on RoboGolfPro for me?

First of all, keep in mind that every Pro has their techniques and philosophies about golf and strokes. Keeping this in mind, when your trainer is working with you, they get to know your limitations, weaknesses and strengths. Based on this information, they are trying to teach you a way to make your swing work for you.

The first step is to get your assessment and profile into RoboGolfPro. It will take a trained golf Pro about 10-15 minutes.

Each and every swing, as well as each part of the swing, can be broken down into geometry and physics that the RoboGolfPro can reproduce. The angle you swing the club, Incline Plane, Swing Plane and Angles at your wrists that you set, and release as the swing occurs before, during and after contact.

There is also important parts of the swing such as height and radius of the swing. Every Pro has their philosophies. But in the last 5 years of in-depth research in creating and using RoboGolfPro throughout Germany has resulted in a series of basic philosophies that are proven by laws of physics.

When a golf club strikes a golf ball in a certain way, there is a predictable and guaranteed result. The golf Pros all agree on these basic essential parts of the golf swing, but how they describe it and how they attain it in relation to your game is personal. Their teaching skills, personalities and experiences determine some of your success. Practice and habit on your end determine the rest.

The RoboGolfPro is the single most advanced golf swing teaching tool ever created. It's another way for your golf Pro to get inside of your golf mind, to perfectly and clearly create the swing you need, the swing you have been trying so hard to perfect. The RoboGolfPro is a way for you to feel the stroke instantly and achieve your "AH-HA" golf moment faster than ever before!

What do you mean by the "AH-HA!" moment?

Have you ever had a lesson and then suddenly, after many swings, you literally feel "the good one"? It's the one swing that has perfect contact with the ball, and the ball flies high, straight and far.

What could take hours in conversation, practice and video review can be created in a few moments. Your golf Pro can take a minute to capture your swing and then with the miracles of

modern day PC tweak the physics of your swing, fix the bad part and then give it back to you corrected.

Now you can FEEL what they have been trying so hard to describe to you. You can SENSE where the changes made because the RoboGolfPro does not let you fall into your old bad habits but instead creates the look, feel and actual muscle memory. In other words, the “AH-HA” moment is created here and now, and you can immediately take this onto the course and work on it.

The golf Pro uses stored model swings in the RoboGolfPro and adjusts them to create the best technical swing related to your physical abilities. The information is stored under your name as a profile and can be recalled at any time. It can be adjusted at any time as well.
