

Thales and IER selected to supply revenue collection systems for the four new automatic lines of the Grand Paris Express metro system

- Thales and EASIER, a division of IER, will supply revenue collection systems for lines 15, 16, 17 and 18 of the Grand Paris Express metro system, as well as integrating these systems into Île-de-France existing ticketing infrastructure.
- The contract includes the delivery of close to 500 ticket-office and self-service ticket vending machines, plus 1,200 access gates.
- The first stations will open to passengers in 2024 ahead of the Olympic and Paralympic Games, with the final sections coming into service in 2030.
- The partners will also provide long-term maintenance and upgrade support to future Grand Paris Express operators.

Société du Grand Paris, the company in charge of the Grand Paris Express urban rail network, has selected Thales and IER to supply revenue collection systems for metro lines 15, 16, 17 and 18. With 68 new stations and close to 200 km of new lines, Grand Paris Express is the largest transport infrastructure project in Europe. Once complete, it will double the size of the French capital's existing metro system. The new lines will bypass the city centre, carrying an expected 3 million daily passengers between major hubs and destinations in the suburbs of Paris.

Société du Grand Paris invited bids for revenue collection systems to equip the network's four new automatic metro lines. Systems such as these have a vital role to play, helping to shape the future of mobility in today's increasingly connected, inclusive and constantly evolving world.

Under the new contract, Thales and IER will design and deliver new ticket vending and validation machines and integrate these systems into the existing Île-de-France Mobilités ticketing

ecosystem. As part of the contract, the partners will also provide maintenance and upgrade support to future operators of the new lines and to Île-de-France Mobilités, the Paris region transport authority. All this new critical infrastructure will be cyber-secured. Patrick Jouin ID Agency will manage the design of this equipment and will be in charge of the conception and monitoring of the production of all the equipment and furniture installed in the station.

This contract award, which is testament to Thales and IER's combined expertise and track record in delivering extremely complex revenue collection systems, comes as Île-de-France Mobilités seeks to modernise its ticketing infrastructure. The machines on the four new Grand Paris Express lines will be contactless-ready, bringing the phasing-out of conventional magnetic-stripe cardboard tickets a step closer.

"At Thales, we are immensely proud that Société du Grand Paris has awarded us this contract. This year, Paris joins Jakarta and Singapore as the third city to place its trust in us. The Paris region will serve as a showcase for our expertise and our talented, dedicated teams." – **Jean-Marc Reynaud, Vice President, Thales Revenue Collection Systems.**

"By opting for our EASIER solutions, combined with Thales's technologies, Société du Grand Paris will enjoy the benefits of smart infrastructure that sets new standards of performance, reliability, availability and security for Grand Paris Express." – **Ludovic Libeski, Managing Director, EASIER, IER.**

About Thales

Thales (Euronext Paris: HO) is a global leader in advanced technologies, investing in digital and “deep tech” innovations – connectivity, big data, artificial intelligence, cybersecurity and quantum computing – to build a confident future crucial for the development of our societies. The Group provides its customers – businesses, organisations and governments – in the defence, aeronautics, space, transport, and digital identity and security domains with solutions, services and products that help them fulfil their critical role, consideration for the individual being the driving force behind all decisions.

Thales has 81,000 employees in 68 countries. In 2020 the Group generated sales of €17 billion.

About EASIER (IER)

EASIER was born from the alliance between the Passenger solutions of IER and Automatic Systems, entities of Blue Systems (Bolloré Group), and relies on their respective strengths: performance, mechanical development, equipment reliability, passenger detection, flow management and ergonomics of solutions. Thus, EASIER offers a varied and high-end range of products and services to air and land transport operators as well as to public establishments. With a global commercial presence and a network of partners and approved distributors, EASIER serves all the big names in the aeronautics industry, public transport and public services, and ensures the sustainability and monitoring of their equipment.
