FOR IMMEDIATE RELEASE

Top 5 Garden Resolutions for the New Year from the Experts at Pike Nurseries

Local garden center invites customers to ring in 2017 with healthy gardening habits

ATLANTA (December 28, 2016) – The New Year is almost here! To help residents make the most of their home and garden during 2017, **Pike Nurseries** offers customers the top five garden resolutions to keep living spaces healthy and thriving. Additionally, the neighborhood garden center is helping take the guesswork out of gardening by hosting FREE classes for customers throughout January.

Improve Health with Houseplants

Gardeners looking to improve health in the New Year should look no further than common houseplants and edible gardens. Research has revealed that certain houseplants – like the Peace Lily and Florist's Chrysanthemum – can efficiently remove pollutants like Formaldehyde, Benzene and Ammonia from a room's air, releasing oxygen and improving the overall health of an environment. Customers looking to try their hand at incorporating healthy houseplants into the home can join Pike Nurseries for a FREE [Houseplants for the Home Class](#) at select locations **January 3-5** and **January 7**. During this class, attendees will learn how to select the right houseplant, how to arrange them and even proper care tips. Additionally, class attendees will receive a 4-inch houseplant to take home and be entered-to-win a \$50 specimen houseplant.

Stop and Smell the Roses

Not only does the garden's atmosphere provide endless enjoyment and tranquility, but spending time outdoors can be beneficial to one's overall health and wellness. One of the top benefits of doing this is lowered stress levels and mental stability due to gardening's relaxing tasks. Whether it is weeding, pruning or digging, working outside can help lower blood pressure and cholesterol or prevent diabetes, heart disease, depression and osteoporosis when practiced on a regular basis. Gardening can also provide low-impact exercise and strength building through planting and lifting of soil and other materials.

Practice Waterwise Habits

Most homeowners overwater their lawn and garden. For improved garden health, water deeper and less often to reduce water use. Lawns should be watered in the early morning to reduce evaporation, while water wands and trigger sprayers should be used to ensure only plants are being watered and not the pavement or ground between them. During the cooler months, yards should be watered less frequently (once or twice a week), whereas warmer temperatures call for more moisture. To avoid overwatering, it's helpful to always group plants of similar water needs together, as well as choose waterwise plants like Rudbeckia, Sedum, Rosemary, Nandina and Helleborus. Another healthy habit in the garden that will save big is mulching. By placing a thin layer of mulch (2-3 inches) on the soil surface surrounding the plants, hundreds of gallons of water can be conserved each year. Last, but not least, amending the soil is an important factor in moisture retention, as it allows roots to establish more easily.

Keep the Lawn Organized

A well-maintained garden not only adds curb appeal to a home, but it also protects the landscape against pests. From pruning dormant plants and cutting back perennials to discarding leaf debris, adding mulch and removing dead annuals and weeds, organization in the garden is key to keeping it looking beautiful and healthy all year-long. Other helpful tips include adding Pansies, Violas, Hellebores and Camellias for pops of color during the bare, winter months, as well as transplanting trees and non-blooming shrubs, so they can develop their root system before the Southern summer heat arrives.

Welcome More Wildlife

With temperatures dropping, the New Year is the perfect time to ready the yard for winter birds. Feathered friends will appreciate the safe haven from the cold, and bird lovers will enjoy a colorful flurry of activity in the garden. To help customers welcome winged-wildlife, Pike Nurseries will host a FREE [Attract Birds to the Backyard Class](#) at select locations **January 17-19** and **January 21**. Guests will learn the essentials needed to attract birds, what type of bird food is best for certain species and how to create an inviting habitat for them during the crucial winter months. All class attendees will receive a 5-pound bag of Pike Nurseries Special Mix Bird Seed and be entered to win a \$50 bird house.

For springtime buzz, pollinator-friendly plants – like Buddleia, Echinacea and Lantana – are perfect for attracting birds, bees and beautiful butterflies, which keep plants healthy and prolific. Additionally, beneficial bugs, like Ladybugs, help keep away unwanted creepy crawlers. These good luck bugs do wonders for the garden since they prey on damaging pests like aphids (a single Ladybug can eat more than 5,000 of these in its lifetime), thrips and spider mites. Plants that are ideal in attracting these good bugs include Lobelia, Coreopsis and Dill.
