

BELGIUM SCALEUP:

DIGITAL WELLBEING

The Digital Wellbeing Action Line leverages digital technologies to stay healthy (prevention and early detection) or cope with an existing chronic condition. Both physical and mental wellbeing are considered. The solutions generally rely on enabling consumers to be well-informed about their wellbeing and to be able to use digital instrumentation to monitor and improve their quality of life.

FIBRICHECK

www.fibricheck.com

Qompium's application FibriCheck detects cardiovascular arrhythmia's via a smartphone app. Patients only have to place their finger for 60 seconds on the camera of their smartphone to detect the pulse waveform.
