

PRESS RELEASE

Mixing architecture, light and experience

Delta Light® brings a fresh spirit to Milan Design Week with original designs and unique partnerships in an inspiring setting in the city centre.

In collaboration with three world-class designers, Delta Light® has turned the surroundings of the historic Palazzo Crivelli into a high-end, monumental installation. Various brand new products will be on display, including designs by architects OMA, lighting designer Dean Skira and artist / designer Arik Levy. On top of that, a line-up of inspiring lectures and talks will take place in the lush palazzo garden, including speakers like Snøhetta, CF Møller and AABE, whom are all related to signature Delta Light projects around the world.

Located at the heart of the Brera Design District, the Palazzo Crivelli boasts a magnificent inner courtyard and a sprawling 2,500 m² garden. These inspiring surroundings are transformed into an architectural playground, enhancing the palazzo's unique features. Visitors are invited to experience a multisensory setting where state-of-the-art Delta Light® lighting solutions take centre stage.

Mirrored facades, 3D-images and minimal colors submerge visitors in a wonderful journey. Different parts of the palazzo are gathered through an architectural volume that incites a sensory experience, resulting in a spatial phenomenon of reflection between light, form and architecture. The stark simplicity of the interference highlights the inherent characteristics of the environment, focusing on the contrast between baroque elements and modern touches.

New in-house designed collections

Superloop and Splitline Magnetic are two new additions to the collection, designed by Delta Light's R&D team.

Superloop

The new Superloop family is an extensive range of slim circular and square shapes, offering a multitude of illumination options. Superloop allows you to choose 'functional', by mounting adjustable Spy modules on the round or square shaped base. It allows you to choose 'decorative', by mounting the light emitting circle in a horizontal way, or it allows you to choose 'eye catcher', by hanging the circle of light vertically, as a statement.

Superloop circular light has the ability to diffuse light all around. The loop can be hung using steel cables, based in one fixation point or multiple suspension points, or from a steel rod suspending the ring from the air. Superloop is also available in a round or square shape with a Delta Light custom engineered 48V low voltage track on the inside. This allows you to position and move light modules all around, offering maximum flexibility and allowing you to meet any need of the project.

Splitline Magnetic

Splitline Magnetic is the newest member of the versatile Splitline profile family. Now, a new magnetic made-to-measure profile is added to the collection. The Splitline M allows for even more dynamics and personalization. Depending on what the space needs, it is possible to add, remove or adjust luminaires whenever and wherever needed. Based on a *plug & play* approach, there is no need for complex technical intervention. Just switch, take and place.

Inside the Magnetic Splitline you can play with an extensive range of discrete or decorative modules. Tweeter has developed to become one of the most iconic ranges in the Delta Light range, and can now also be combined with the Splitline. Same goes for the Gibbo suspension – featuring a transparent, opal or amber handblown globe – or the brand-new slender Microspy suspensions.

CTRL DELTA & Smart 48 / New control technology

CTRL DELTA and Smart 48 are two innovations developed by Delta Light in-house R&D team. CTRL Delta wireless dimming technology enables you to control and manage dimmable luminaires via mobile devices (Apple or Android). You don't need any new wiring, switches, devices or networks. Plug in the lighting fixture and pair it with your smartphone or tablet.

Smart 48 combines 48V- DC power with a dimmable input signal and distributes it to the luminaire, creating an easy 2 wire power and dimming solution for 48V luminaires or 48V profiles.

Exciting design collaborations with OMA, Dean Skira & Arik Levy

Delta Light® presents new designs in collaboration with world-renowned architects OMA (Office for Metropolitan Architecture), versatile designer-artist Arik Levy and International award-winning lighting designer Dean Skira. In Milan Delta Light collaborated with each of designers on the scenography of their new design. These unique, one-off spaces provide the perfect backdrop for their latest creations.

XY180 by OMA

'XY180' is a 3-piece collection of luminaires designed by OMA. The collection was born from a fascination with point, line and surface; key characters in the discourse of architecture. The floor, wall and ceiling lights, are for both individual and shared workspace, but can also be applied to domestic and public interior spaces.

The line uses precise geometric proportions. The base elements, which include a tube light in different lengths, and a spot light in either a discreet 8W or a powerful 20W caliber, can be combined with a hinge, to generate countless light conditions, both complex. As individual components, each part is familiar. When assembled however, they can take unpredictable and asymmetrical positions. The dimmable tube lights give ambient lighting, democratic and shared, while the spot lights, in two different outfits, provide focused lighting, isolated and hierarchal.

Polesano by Dean Skira

Polesano by Dean Skira is a very new concept in lighting instruments designed specifically for urban setting, be that a pedestrian pathway, roadway, park, square or landscape. It provides total flexibility for the designer to create their own set of optic characteristics, whilst keeping the same aesthetic for the entire system regardless of the area. Its modularity and flexibility provides personal involvement for the designer to create their unique set of luminaires or other elements within the existing form of this "device". Integrating video surveillance, Wi-Fi, speakers or other IoT unit is a next step in the development of Polesano.

Butler by Arik Levy

Arik Levy presents new additions to the Butler line. The inspiration for the Butler collection was a coincidence of different elements and a physical metaphor. On one hand, it's a re-interpretation of a well-known archetype, the classic lamp shade as we have known it for many years. The coincidental element came from Arik cycling through Paris years ago, passing by a big pile of folded paper, used to create the well-known plissé fashion classics. For the occasion of Milan Design Week 2017 new extensions of the Butler range are presented in a botanical setting.

Butler strap is a light application that fits our daily actions and changes in the way we want to do things. The product can adapt to any vertical surface, trees, pillars, architecture or anything else we can wrap its strap around.

Butler Floor triplet is a group of Butlers mounted on one base like growing mushrooms. They are connected to one source which facilitates the installation of the product.

Butler Chandelier is the one and only unique outdoor chandelier. The lights are set in to a smart profile that carries the electricity and holds the light heads like a crown in the air; its weight acting as a self-balanced core. The chandelier will "warm up" the space and give it the feeling of t a castle or the home even if we have no ceiling.

The Lighting Bible 12

Delta Light will launch a new edition of its catalogue – The Lighting Bible 12 – by mid May. To stay updated please go to www.deltalight.com/lb12
